PARISIEN

About us

Laboratoire L'IDÉAL Parisien

producer of highest quality products

We are a manufacturing company with almost 20 years of experience in production:

- cosmetics
- medical devices
- dietary supplements
- products for children
- biocidal products
- veterinary products

We can be proud of cooperating with well-known, worldwide cosmetics and pharmacy companies.

Our products and services are characterized by its acknowledged reputation and quality.

Date of establishment – 1st of September 2001 r.

Headquarter

Zygmunt Krasińskiego Avenue 14/3a, 30 – 101 Kraków, Poland

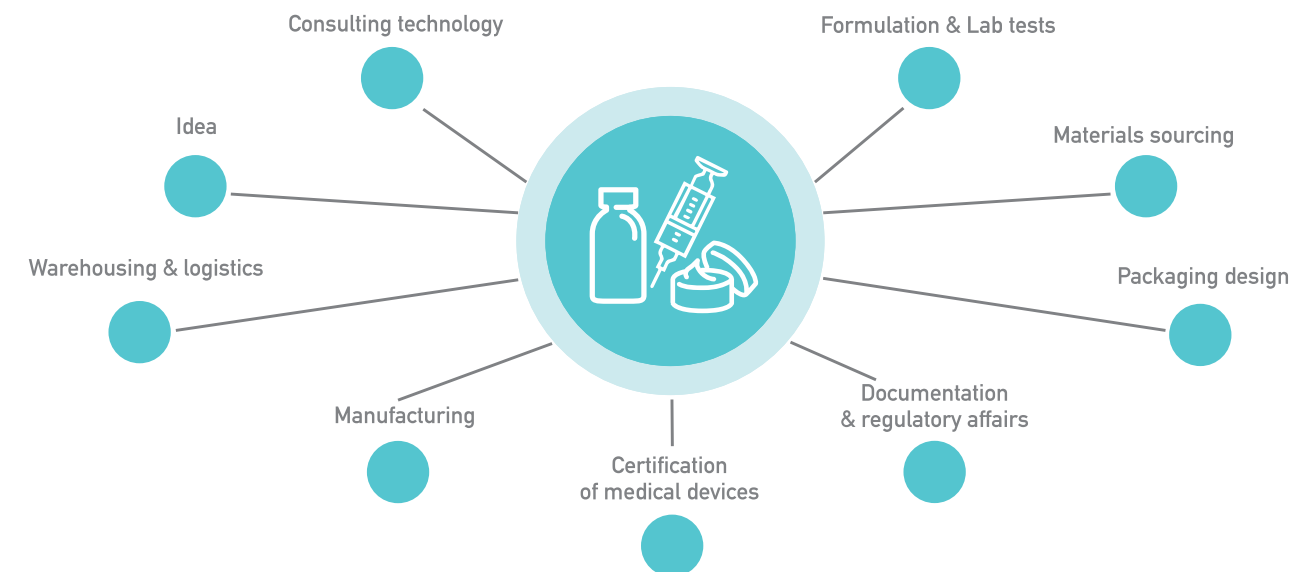

What we do?

Laboratoire L'IDÉAL Parisien provides a comprehensive service from an idea through product development and registration to the production and release of a finished product.

No Idea for new product?

Our R&D department can elaborate any new formula for:

- Cosmetic products
- Medical devices
- Dietary supplements
- Products for children
- Veterinary products
- Biocidal products

Quality

Our products and services are characterized by its acknowledged reputation and quality.
We have implemented and certified systems:

- ISO 9001
- ISO 13485 for medical devices manufacturing
- HACCP
- MDD for medical devices
- Sanitary permit for the production of dietary supplements
- ISO 22 000
- GMP ISO 22716
- Veterinary number – PL1206144p.
- Halal certificate
- COSMOS
- Vegan

MEDICAL DEVICES

Vaginal globules

Status: Medical device class IIa  2274

General information and indications for use:

Intended for women of childbearing age and menopausal women to help relieve discomfort and dryness, tension, itching, and burning of the vaginal mucosa linked to:

- atrophy of the vaginal mucosa,
- oestrogen deficiency,
- dyspareunia (pain during intercourse),
- long-term stress.

In order to help moisturize the vaginal epithelium:

- after surgical and gynecological procedures,
- in case of abrasions or other minor mechanical injuries to the vaginal mucosa,
- after labour,
- after chemotherapy, radiotherapy, cryotherapy,
- after laser treatments,
- in case of changes caused by the use of hormonal drugs;
- in the perimenopausal period,
- recommended for prevention of adverse changes in the vagina's microbial flora and pH (e.g. caused by travelling, swimming pools, sauna, fitness, antibiotics) by moisturizing and maintaining the vagina's natural pH,
- product reduces unpleasant vaginal odor.

Active ingredients:

Lactic acid 90 % - helps maintain the proper pH of the vagina.

Sodium Hyaluronate - highly moisturizing properties.

Glycogen - supports the action of lactic acid and helps maintain normal pH.

Vitamin E - deeply moisturizing properties.

A non-hormonal product.

Does not contain PEG, parabens or detergents including SLS, SLES.

Packaging:

Blister containing 1 globule (free sample).

Blister containing 2 globules (free sample).

Blister containing 5 globules.

Blister containing 6 globules.

Blister containing 7 globules.

2 Blisters with 5 globules each (10 globules in total).

Each globule weighs approx. 1.6 g.

Blister containing 5 globules.

Vaginal intimate gel

Status: Medical device class IIa  2274

General information and indications for use:

Intended for women in their reproductive years and during menopause, in order to alleviate the symptoms of vaginal dryness (discomfort, tension, itching, burning of vaginal mucous membranes) related to:

- atrophy of vaginal mucous membranes,
- deficiency of oestrogen,
- long term stress.

In order to help moisturize the vaginal epithelial surface:

- after surgical and gynecological procedures,
- after abrasions or other minor mechanical traumas of the vaginal mucous membranes,
- after labour,
- after chemotherapy, radiotherapy, cryotherapy,
- after laser treatments,
- at the occurrence of changes resulting from the use of hormonal drugs,
- during the perimenopausal period,
- recommended for protection from negative changes in the vagina's microbial flora and pH (e.g. caused by travelling, swimming-pools, sauna, fitness, antibiotics) through moisturising and maintaining the vagina's natural pH,
- alleviates abrasions and helps moisturize the vaginal mucous membranes which promotes discomfort reduction during sexual intercourse,
- reduces unpleasant vaginal smell.

Active ingredients:

Lactic acid 90 % - helps maintain the proper pH of the vagina.
Sodium Hyaluronate - highly moisturizing properties.

Odourless.

A non-hormonal product.

A hypoallergenic product.

Does not contain PEG, parabens, detergents, including: SLS, SLES.

Simple and hygienic application of the product ensures high comfort of use.

Packaging:

Long nozzle tube: 5 ml

A single package of the product contains: disposable applicators with gel and instructions for use

Available packaging: 1 applicator (free sample), 2 applicator (free sample), 3 applicators, 5 applicators, 6 applicators, 7 applicators, 10 applicators

Long nozzle tube: 5 ml

Water based lubricant

Status: Medical device class IIa  2274

General information and indications for use:

- ease sexual intercourse with impaired penetration (including vaginal dryness) also with the use of condoms,
- relieve pain within the genitals during sexual intercourse,
- relieve the symptoms of vaginal dryness leading to friction and epithelial damage of the intimate area during sexual intercourse,
- help ease gynecological examinations (e.g. rectal temperature measurements).

Does not stain the underwear

Unscented

Non-hormonal product

Hypoallergenic product

Does not contain PEG, parabens, detergents including: SLS, SLES

Gel can be used depending on needs, several times a day, regularly, with no age restrictions.
The product can be used in contact with latex, polyurethane and polyethylene condoms.
Gel can be applied directly on the condom.

Packaging:

Tube: 30ml, 50 ml, 75 ml, 100 ml, 150 ml, 250ml

Bottle with pump: 30 ml, 50 ml, 100 ml, 150 ml, 250 ml, 500 ml 1000 ml

Sachets of 5 ml packed with 5, 10, 15, 20, 25, 50 pcs.

Sachets of 5 ml

Tube: 30 ml, 50 ml,
75 ml, 100 ml,
150 ml, 250 ml

Bottle with pump:
30 ml, 50 ml, 100 ml, 150 ml,
250 ml, 500 ml, 1000 ml

Silicone based lubricant

Status: Medical device class IIa  2274

General information and indications for use:

- ease sexual intercourse with impaired penetration (including vaginal dryness) also with the use of condoms,
- relieve pain within the genitals during sexual intercourse,
- relieve the symptoms of vaginal dryness leading to friction and epithelial damage of the intimate area during sexual intercourse,
- help ease gynecological examinations (e.g. rectal temperature measurements).

Perfectly remains on the application area.

It does not stick.

Odorless.

Non-hormonal product.

Does not contain PEG, parabens, detergents including: SLS, SLES

Gel can be used depending on needs, several times a day, regularly, with no age restrictions.

The product can be used in contact with latex, polyurethane and polyethylene condoms.

Gel can be applied directly on the condom.

Packaging:

Bottle with pump: 30 ml, 50 ml, 75 ml, 100 ml, 150 ml

Sachets of 5 ml packed with 5, 10, 15, 20, 25, 50 pcs.

Bottle with pump:
30 ml, 50 ml, 100 ml, 150 ml

Atopic dermatitis cream

Status: Medical device class I

General information and indications for use:

The product is recommended for:

- relieving the symptoms of dry skin (discomfort, tension, itching, burning) caused by:
- AD atopic dermatitis,
- psoriasis,
- eczema,
- protection of the affected skin from the effects of the environment,
- protection of skin prone to extreme dryness that causes cracks and damage.

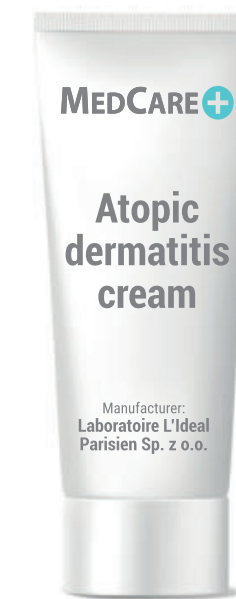

Does not contain PEG, parabens, detergents (including SLS, SLES).

Minimum age 1 month.

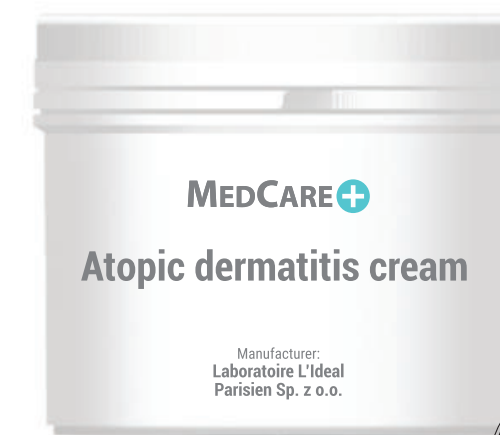

Packaging:

Tube: 100 ml

Jar: 500 ml

Tube: 100 ml

Jar: 500 ml

Coronavirus Prevention Solutions

Status: Medical device class I

The nasal mucosa constitutes the body's first physical barrier and the immune system's first line of defense. Thanks to its specific structure and production of mucus, it cleans the respiratory tract of inhaled harmful substances and prevents viruses, bacteria, and fungi from penetrating and spreading. The air we breathe in through the nose is purified, moisturized, and warmed, which is crucial for the work of the entire respiratory system. The nasal cavity creates an entrance for infections created by various types of viruses, for example with the coronaviruses including the SARS-CoV-2 virus that causes the COVID19 disease as well as influenza viruses.

The mouth constitutes the main entrance of our body through which infection can occur, for example with the coronaviruses including the SARS-CoV-2 virus that causes the COVID19 disease as well as influenza viruses. Large amounts of various substances pass through the throat every day. The throat constitutes an entrance to our body for nutrients, but also for microbes and irritating agents.

The virus multiplies where it enters the cells, and that is also where the symptoms of the disease appear. The damaged nasal and oral mucosa does not fulfill its basic function and increases the risk of acute and chronic infectious diseases, including frequent seasonal viral infections of the nose and throat.

We can protect ourselves against infection through daily prevention.

However, the nasal and oral mucosa serves its protective function only when it is in good physiological condition, meaning when it's well moisturized.

Too dry and overheated air, pollutant particles, toxic vapors in the inhaled air, as well as local application of nasal decongestants irritate and dry out the nasal mucosa.

Adverse environmental factors affect especially the elderly who suffer from dry oral cavity, throat and experience gradual atrophy of the nasal mucosa (the so-called dry nose), which leads to damaging the nasal mucosa, oral cavity and throat and works in favor of the development of viral and bacterial infections.

When it comes to viral infections - each virus is a microscopic particle that cannot reproduce on its own but is able to replicate (multiply) only after entering the host's cell. That is why it is important to prevent this from happening by using prophylaxis.

Using the product in a preventive manner reduces the risk of viral infection caused, among others, by for example by the coronaviruses including the SARS-CoV-2 virus as well as influenza viruses,, through a moisturizing and protective effect. Using the product at the beginning of the infection inhibits the development of the disease, shortens the duration of symptoms the occurrence of the disease such as loss of smell and taste, coughing, but also reduces the likelihood of becoming infected again and that is why the oral and nasal mucosa regains its natural defense functions when using the product.

After using the product, in people infected with a virus e.g. the coronaviruses including the SARS-CoV-2 virus as well as influenza viruses, the inactivation of viral particles in the mucus secretions of the nose and paranasal sinuses and in the saliva has been observed. Using the product works in favor of preventing the spread of the virus by asymptomatic patients.

NASAL GEL SPRAY

Packaging:

Glass bottle: 20 ml with nasal atomizer

Plastic bottle: 20 ml with nasal atomizer

GEL SPRAY FOR THE ORAL CAVITY

Packaging:

Glass bottle: 20 ml with nasal atomizer

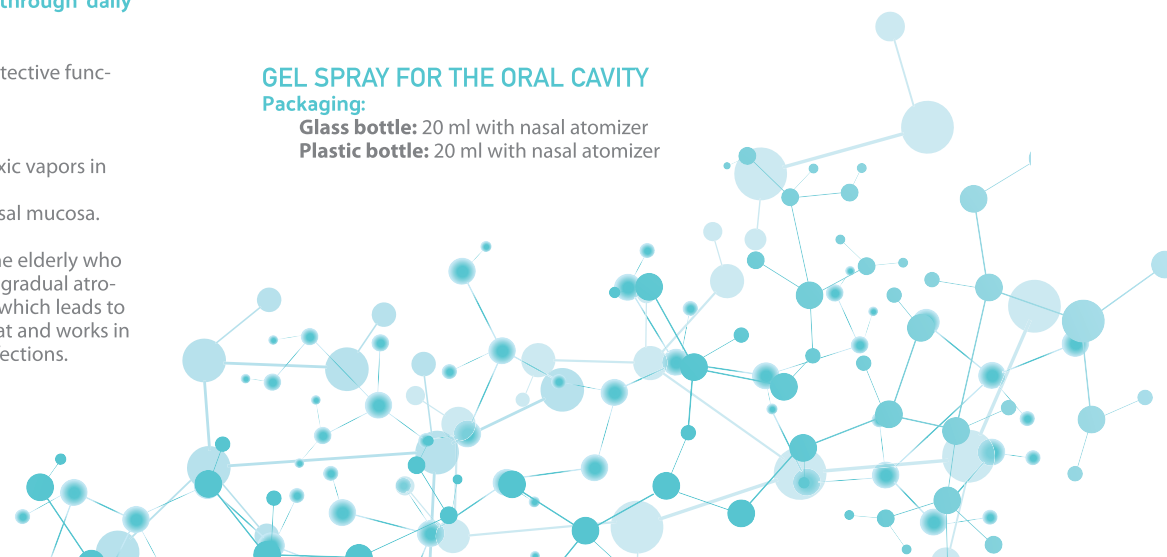

Plastic bottle: 20 ml with nasal atomizer

Glass bottle: 20 ml with nasal atomizer

Glass bottle: 20 ml with nasal atomizer

Scar gel

Status: Medical device class I

General information and indications for use:

The product is recommended for:

Enhancing the treatment of scars of various origins, including after:

- burns,
- injuries (abrasions, cuts),
- surgeries (C-section),
- surgical treatment.

As the scar's protective layer against rubbing and sunlight

Active ingredients:

Biogenic Gensil-210L - an innovative compound of active ingredients concealed in one product.

When applied to the skin, this practical silicone elastomer noticeably softens it.

Absorbs quickly.

Does not contain PEG, parabens, detergents (including SLS, SLES).

Non-sticky.

Safe for the skin.

Provides all-day protection.

Packaging:

Tube: 15 ml

Tube: 15 ml

Teething gel

Status: Medical device class I

Specialized medical aid used on the gums for the alleviation of ailments during teething in infants.

General information and indications for use:

The product is recommended for:

- alleviating the pain caused by teething,
- as a protective layer for the gums against irritations during teething,
- reduces irritation and redness of the gums where teeth are erupting,
- reduces swelling of the gums during teething.

Does not contain sugar, alcohol, anesthetic substances that can cause side effects if swallowed.

Active ingredients:

Aloe - anti-inflammatory, soothing, moisturizing effect.

Saffron - anti-inflammatory effect.

Sodium hyaluronate - moisturizing effect.

Ammonium Glycyrrhizate - it comes from licorice roots and has anti-inflammatory and antibacterial properties, soothes irritations, accelerates healing and moisturizes the skin.

Packaging:

Tube: 15 ml

Tube: 15 ml

Mouth ulcer gel

Status: Medical device class I

A specialized medical product for use in the oral cavity to relieve pain related to lesions such as mouth sores, thrushes, minor wounds. The product insulates the lesion and protects against irritation.

General information and indications for use:

The product is recommended for:

- aphthous ulcers,
- aphthous stomatitis,
- thrush,
- minor injuries, including those caused by braces, and poorly fitting dental dentures.

Active ingredients:

Ammonium Glycyrrhizate - it comes from licorice roots and has anti-inflammatory and antibacterial properties, soothes irritations, accelerates healing and moisturizes the skin.

PVP polyvinylpyrrolidone - soothing, anti-inflammatory, protective by creating a coating / film on the mucosa at the site of application.

Packaging:

Tube: 10 ml

Tube: 10 ml

HPV liquid

Status: Medical device class I

An innovative medical product in the form of a mouthwash to protect against the penetration of HPV into the host cell. The ingredients responsible for the essential action of the product are PVP and iota-carrageenan.

General information and indications for use:

The product is recommended for:

- thanks to the content of PVP as a physical blockage of the virus,
- protection for the oropharyngeal areas as a measure for people at high risk of exposure of the mouth and respiratory tract to pathogens, including HPV,
- preventing the spread of the respiratory virus,
- thanks to the content of iota-carrageenan to reduce recurrence after interventions, e.g. HPV-induced warts recurrence after cryotherapy or surgery.

Active ingredients:

PVP polyvinylpyrrolidone - soothing, anti-inflammatory, protective by creating a coating / film on the mucosa at the site of application.

Carragenan - Iota Carragenan moisturizes, soothes, protects by creating a coating / film on the mucosa in combination with PVP

Packaging:

Bottle: 225 ml

Bottle: 225 ml

HPV spray for intimate areas

Status: Medical device class I

Innovative medical device in the form of spray for intimate areas to protect against HPV penetration into the host cell. The main ingredients are tannin and iota-carrageenan. Spray on the intimate area immediately before and after sexual intercourse.

General information and indications for use:

The product is recommended as:

- a physical barrier to the virus, provided by iota-carrageenan,
- a protection for the anal-genital area for people at high risk of exposure of the intimate area to pathogens including HPV,
- a preventive measure (tannin) against the spread of HPV from the intimate area to other areas such as mouth and throat,
- a preventive measure (iota-carrageenan) to reduce recurrence after interventions, e.g. recurrence of warts caused by HPV after cryotherapy or surgery.

Packaging:

Bottle: 50 ml

Bottle: 50 ml

Ointment for children and infants

Status: Medical device class I

The product is intended to be applied on the skin with irritations and nappy rash in infants and young children and for preventive use against nappy rash.

The product is intended to reduce discomfort symptoms accompanying skin lesions in the progress of psoriasis.

General information and indications for use:

- supportive in nappy rash when the clinical picture is characterised by the symptoms of irritant dermatitis such as erythema and oedema but not when skin lesions are present: exudative papules and erosions,
- protective, it creates a subtle film/protective barrier on the skin which secures the skin against moisture (urine, faeces) and irritation,
- soothing, the feeling of burning and itching in nappy rash,
- prevents skin irritations and blister,
- soothing in case of skin changes in the course of psoriatic disease in adults,
- soothing in case of skin changes in the course of psoriatic disease in children and infants only after consultation with a doctor.

Does not contain PEG, parabens, detergents, including: SLS, SLES.

It is safe for skin.

It provides full-day protection.

Active ingredients:

Petroleum jelly - forms a highly hydrophobic hydrocarbon film/protective layer on the skin.

Linseed oil, when combined with petroleum jelly, forms a protective layer on the skin and also soothes burning and itching (due to the presence of fatty acids in its composition).

Softisan - forms a protective layer and has a high water binding capacity. Softisan is particularly recommended for very sensitive skin and has no allergic effect.

Packaging:

Tube: 50 ml, 100 ml

Tube: 50 ml, 100 ml

Anti-lice shampoo

Status: Medical device class I

General information and indications for use:

- shampoo for hair infested with lice,
- dimethicone contained in the shampoo coats a hair's surface, makes it more pliable, robust and glossy,
- acts as a barrier that prevents lice colonisation on head skin,
- the shampoo has a pleasant fragrance and a care formula which facilitates hair combing,
- shampoo for all types of hair with the problem of pediculosis.

Active ingredients:

Dimethicone – due to its numerous applications it provides care for hair, protecting them from influence of exterior factors, it causes hair to be robust and shimmery. Simultaneously, it acts as a barrier that prevents lice colonisation on head skin.

Packaging:

Bottle: 100 ml

Bottle: 100 ml

COSMETICS

Heel stick with urea

Status: Cosmetic

General information and indications for use:

The product is recommended for:

- reduction of callusing of the skin of the feet, increasing the degree of skin hydration advisable for:
 - people with dry and chapped skin on the heels and feet,
 - diabetics,
 - people with hyperkeratosis (excessive keratinisation of the skin of the heels and feet),
 - elderly people.
- alleviation of pain (occurring while moving) with problems with chapped heels,
- mechanical protection of the skin against scrapes, especially advisable for:
 - physically active people,
 - people with sensitive skin on the feet and heels.

Water and sweat resistant.

Does not contain PEG, parabens, detergents, this including: SLS, SLES.

Non-sticky, does not smudge your shoes .

Safe for the skin.

Provides all-day protection.

Active ingredients:

Urea - softens the skin, has an exfoliating effect on the skin, removes dead epidermal cells.

Packaging:

Stick: 15 ml

Stick: 15 ml

Foot stick

Status: Cosmetic

The use of the product helps to restore the proper skin structure of the feet and heels, protects against inflammation, protects against the possibility of scrapes and epidermis damage.

General information and indications for use:

The product is recommended for:

- mechanical protection of the skin against scrapes especially advisable for:
 - physically active people,
 - people with sensitive skin on the feet and heels,
- reduction of callousing of the skin of the feet, increase of the degree of skin hydration advisable for:
 - people with dry and chapped skin on the heels and feet,
 - diabetics,
 - people with hyperkeratosis (excessive keratinisation of the skin of the heels and feet),
 - elderly people,
- alleviation of pain (occurring while moving) with problems with cracked heels.

Water and sweat resistant.

Does not contain PEG, parabens, detergents including: SLS, SLES.

Non-sticky, does not smudge shoes.

Safe for the skin.

Provides all-day protection.

Active ingredients:

Shea butter - prevents the skin from drying out, soothing, anti-inflammatory effect, repairing and protecting the skin, absorbs quickly, nourishing and regenerating the skin, leaving a protective lipid layer on it.

Vitamin E - protective effect on the skin, helping to reduce skin damage, antioxidant and anti-inflammatory effect.

Sweet almond oil - due to its caring properties, sweet almond oil is a very good emollient, which softens, smoothes and moisturizes the skin. It is suitable for all skin types and does not feel greasy.

Packaging:

Stick: 15 ml

Stick: 15 ml

Stick for atopic skin

Status: Cosmetic

A specialized product for skin suffering from atopic dermatitis (AD), psoriasis, and eczema.

The cream forms a protective layer that moisturizes and enhances skin elasticity, soothes skin lesions, alleviates dryness characteristic of atopic dermatitis, psoriasis and eczema.

General information and indications for use:

The product is recommended for:

- relieving the symptoms of dry skin (discomfort, tension, itching, burning) caused by:
 - AD atopic dermatitis,
 - psoriasis,
 - eczema,
- protection of the affected skin from the effects of the environment,
- protection of skin prone to extreme dryness that causes cracks and damage.

Does not contain PEG, parabens, detergents (including SLS, SLES).

Fun and easy to use.

Non-sticky.

The product absorbs quickly, does not stain clothes and bedding.

Can be used on large areas of the body.

Can be used on infants as young as one month old.

Active ingredients:

Shea butter - prevents the skin from drying out, soothing, anti-inflammatory effect, repairing and protecting the skin, absorbs quickly, nourishing and regenerating the skin, leaving a protective lipid layer on it.

Vitamin E - protective effect on the skin, helping to reduce skin damage, antioxidant and anti-inflammatory effect.

Hemp oil - soothes, regenerates, smoothes and moisturizes the skin.

Packaging:

Stick: 15 ml

Stick: 15 ml

Stick for sub-diaper areas

Status: Cosmetic

A specialized product for use on the skin of the sub-diaper area, in the period of diaper dermatitis as well as prophylactically. The product creates a protective barrier that moisturizes and soothes damage and protects the skin against the negative effects of irritating factors.

General information and indications for use:

The product is recommended for:

- mechanical protection of the skin against scrapes especially,
- helpful in diaper dermatitis,
- protectively, creates a delicate film on the skin that protects the skin against moisture and irritation,
- relieving itching in diaper dermatitis,
- prevents skin irritation and chafing.

Does not contain PEG, parabens, detergents (including SLS, SLES) .

Safe for the skin.

Active ingredients:

Shea butter - prevents the skin from drying out, soothing, anti-inflammatory effect, repairing and protecting the skin, absorbs quickly, nourishing and regenerating the skin, leaving a protective lipid layer on it

Vitamin E - protective effect on the skin, helping to reduce skin damage, antioxidant and anti-inflammatory effect.

Sweet almond oil - due to its caring properties, sweet almond oil is a very good emollient, which softens, smoothes and moisturizes the skin. It is suitable for all skin types and does not feel greasy. It is especially recommended for baby skin care because it is very gentle and non-irritating.

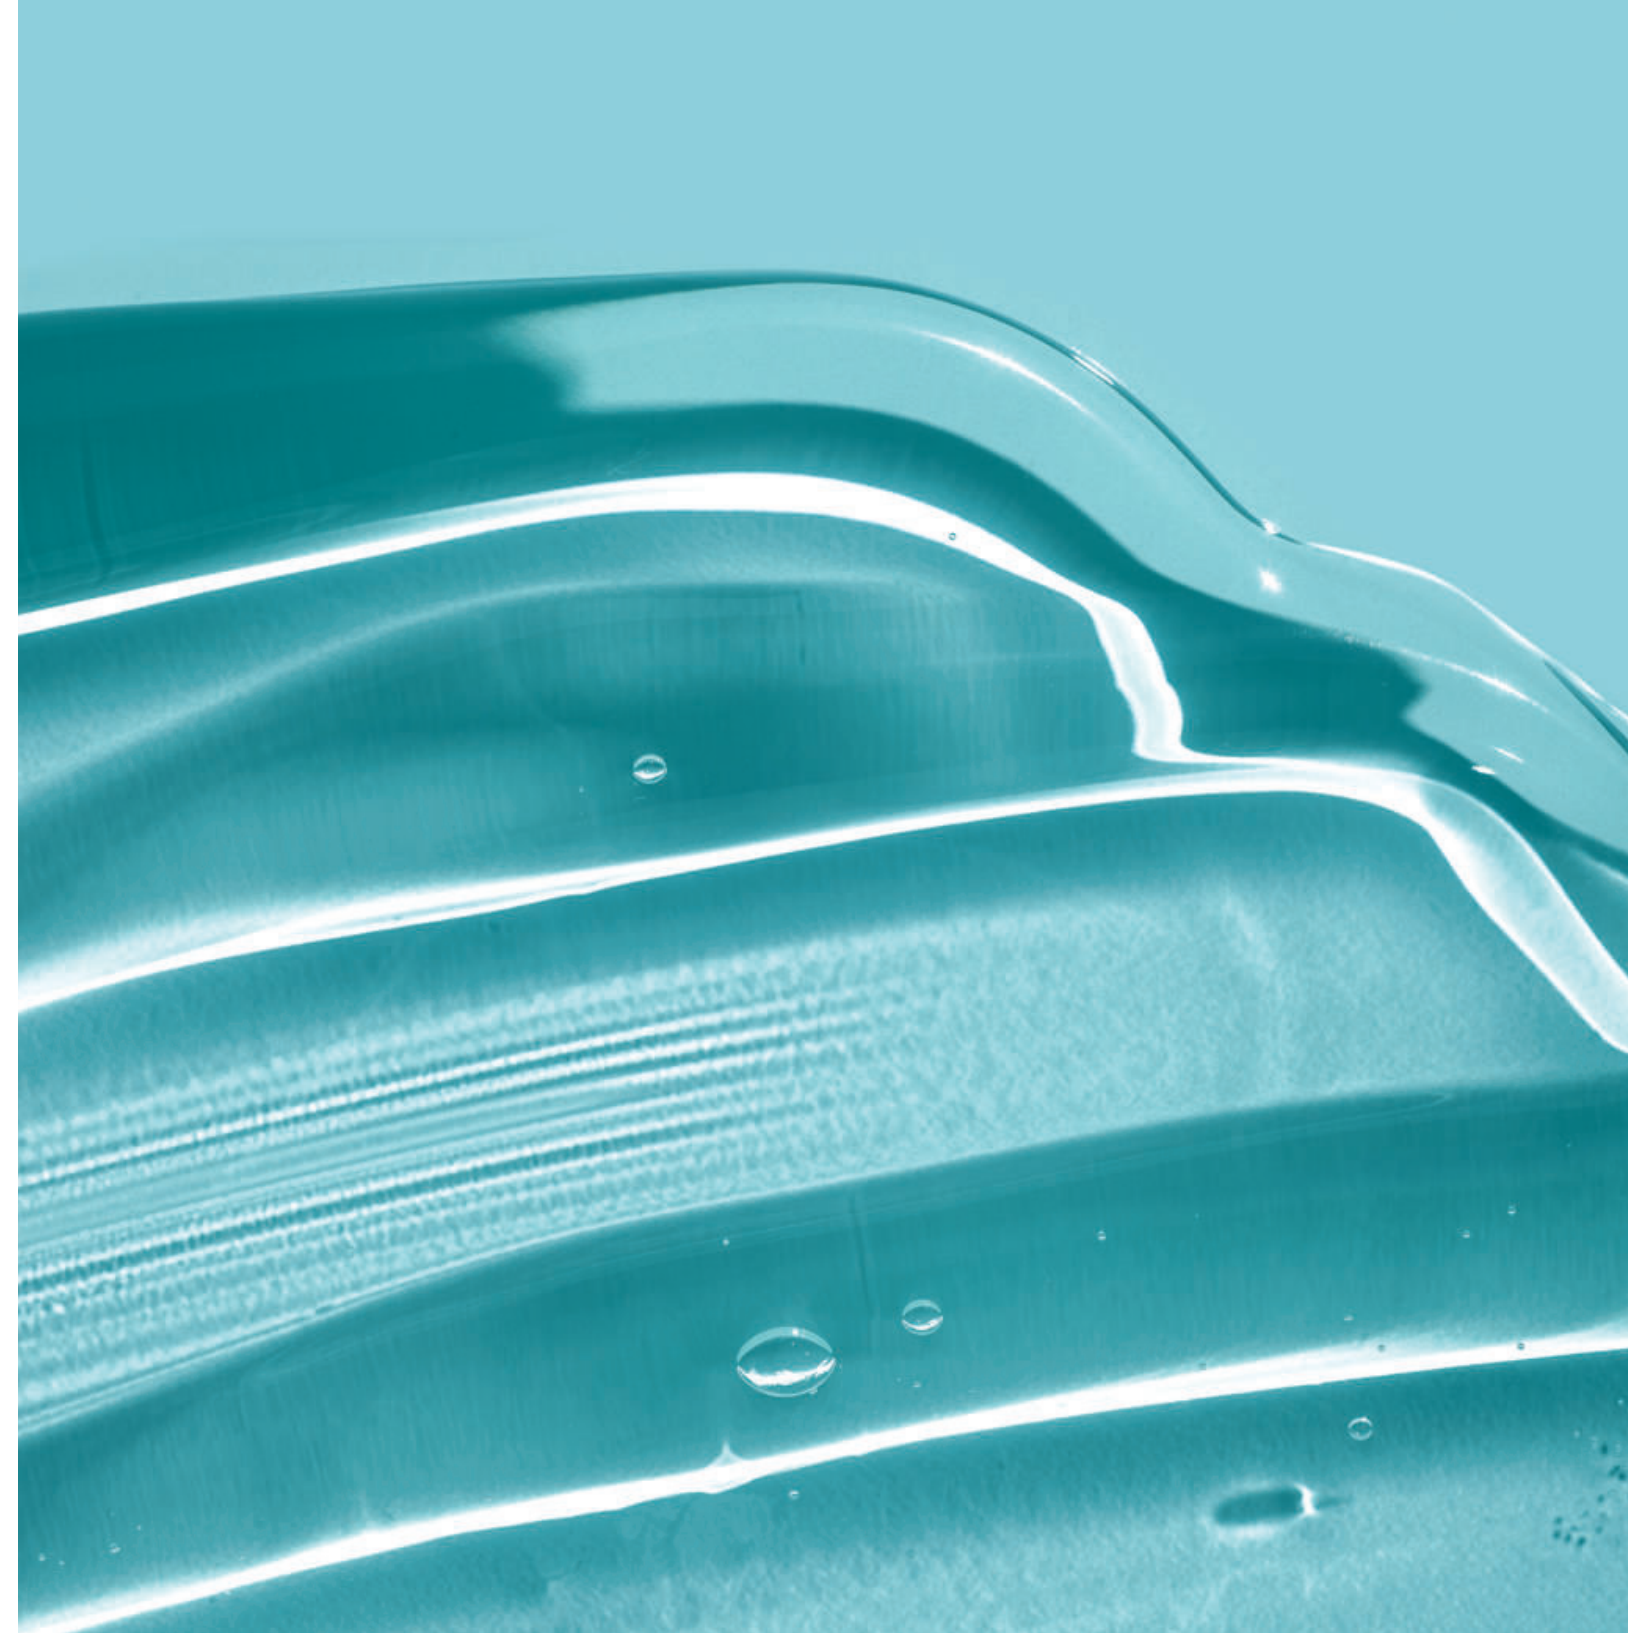

Kalamina - antiseptic, anti-inflammatory, soothing and protective properties.

Zinc oxide - it has astringent and protective properties for the skin, and supports the healing of damaged skin.

Packaging:

Stick: 15 ml

PRODUCTS FOR CHILDREN

Electrolytes for dehydrated children

Status: dietary supplement

General information and indications for use:

- dietary management in states of dehydration, specially during diarrhea or vomiting and in situations where there is a risk of dehydration.

Packaging:

Bottle: 200 ml

Bottle: 200 ml

Hypoallergenic soap for children

Status: Cosmetic

General information and indications for use:

- thoroughly removes impurities from the skin's surface without irritating it or causing allergic reactions,
- the formula was developed on the basis of mild surfactants and enriched with D-panthenol, Chamomile and Aloe Vera that moisturize, care and protect the delicate hands of the child,
- pleasant fruity aroma and beautiful color encourage to use of the product,
- the fragrance compositions used do not contain allergens,
- the original packaging in the form of a bottle with a ball makes washing hands a fun.

Active Ingredients:

Aloe vera gel - antibacterial and moisturizing properties.

Chamomile extract - soothing, anti-inflammatory and antibacterial properties.

Panthenol – moisturizing and soothing properties.

Packaging:

Roll on bottle: 50 ml

ANTY wiruski

Roll on bottle: 50 ml

VETERINARY PRODUCTS

Shampoo for cats & dogs

- sensitive skin with allergic tendency

Status: veterinary product

General information and indications for use:

- a gentle veterinary dermocosmetic for dogs and cats with skin sensitive and prone to allergies,
- the product has very good washing properties
- gently removes exfoliative epidermis and ensures its proper lubrication and hydration,
- has a positive effect on the reconstruction of damaged skin and fur, and does not irritate the delicate skin of animals,
- suitable for puppies and kittens.

Active Ingredients:

Calendula – bacteriostatic properties, soothes irritation, regenerates and restores skin balance.

Aloe Vera - maintains proper hydration of the epidermis, nourishes and protects against infections and regulates sebaceous glands.

Packaging: Tube: 125 ml with flip top

- skin prone to seborrheic dermatitis

Status: veterinary product

General information and indications for use:

- veterinary dermocosmetic for dogs and cats prone to seborrhea, excessive flaking of the skin,
- the product has very good washing properties, promotes the removal of dead cells from the skin surface and ensures adequate lubrication and hydration of the epidermis,
- positively affects the reconstruction of damaged parts of the skin,
- the active substances contained in the product improve the quality of the coat.

Active Ingredients:

Juniper - normalizes sebaceous glands, improves blood circulation under the skin, keeping it properly oxygenated and nutrition, reduces itching, has antiseptic, bactericidal and bacteriostatic properties.

Aloe Vera - maintains proper hydration of the epidermis, nourishes and protects against infections, regulates sebaceous glands.

Packaging: Tube: 125 ml with flip top

Tube: 125 ml
with flip top

- atopic skin during inflammation

Status: veterinary product

General information and indications for use:

- veterinary dermocosmetic for dogs and cats prone to inflammation of the skin caused by bacteria and fungi and resulting from hypersensitivity and hormone-dependent dermatoses,
- the product has very good cleaning properties, promotes the removal of pathogenic microorganisms from the skin surface and supports the proper reconstruction of the lipid layer,
- the active substances contained in the product nourish the skin and improve the reconstruction of good quality coat.

Active Ingredients:

Allantoin - intensively moisturizes, soothes irritations, egenerates, smoothes and softens the epidermis, alleviates the symptoms of skin peeling, stimulates granulation and epidermis formation.

Panthenol - soothes irritations, gives hair glow, accelerates tissue regeneration, promotes healing of damages, reduces itching, maintains proper hydration of the epidermis.

Coconut Oil - stimulates hair growth, nourishes and moisturizes, effectively supports the reconstruction of the lipid barrier.

Chlorhexidine concentration 3% - inhibits the growth of gram-positive and gram-negative bacteria and fungi, including yeast.

Packaging:

Tube: 125 ml with flip top

Tube: 125 ml
with flip top

Mouth wash for cats & dogs

Status: veterinary product

General information and indications for use:

- **Daily use favorably affects the oral cavity of the animal:**
 - contributes to the reduction of plaque,
 - prevents the formation of tartar,
 - maintains healthy gums,
 - removes bacteria in interdental spaces,
 - neutralizes unpleasant smell from the mouth.

Active Ingredients:

Neutralized zinc in the form of zinc gluconate – reduces accumulation of plaque and removes the unpleasant smell from the mouth
